PORTFOLIO

Acess: <http://marcofaga.github.io>

SKILLS

R, Python, PHP, HTML, quantitative and qualitative statistical analysis, GIS and georeferenced data, web scraping, Power BI, Gephi, Machine learning, and Deep Neural Networks. NLP e Text mining. Expertise in data visualization, hypothesis generation, and the creation of customized or automated reports. Data-driven decision-making.

AREAS OF EXPERTISE

Brazilian Elections, politics, child labor, school dropout, education, social networks, marketing, slave labor, COVID, unions, and research funding.

PROJECTS

- **Webscrap Real State Data- Privado**

april 2025

Development of a web scraping algorithm for cataloging real estate data from Caixa Econômica Federal. The program was developed in Python with browser automation.

- **Elections Around the World - University of Notre Dame**

april 2025

Development of a database and analysis of the impact of Electoral Management Bodies (EMBs) on the quality of democracies worldwide. The study was conducted using data analysis in R.

LANGUAGES

Advanced English and
Native Portuguese

- **Data Classification through Deep Neural Network - CEPESPDData - FGV/São Paulo**

feburay 2025

Development of a Deep Neural Network model for categorizing candidates' assets, using a pre-trained BERT model with supervised learning. Optimization of classification through fine-tuning and hyperparameter adjustment, improving accuracy in automatic categorization.

- **University of Texas at Austin**

October 2024

Construction of a geolocated database of Catholic churches across the national territory, available in RData and CSV formats for geospatial analysis and visualization.

- **FGV- CEPESP**

Since January 2024

Research on elections and Brazilian politics at the Center for Politics and Economics of the Public Sector at Fundação Getúlio Vargas. Administration and management of the CEPESP Data electoral database and RAIS.

- **Small Merchants Survey – IPSOS – Mozambique**

October 2023

Data review and analysis of a survey with small merchants in Mozambique. Review of data in SPSS codes and translation to R.

- **ESEB 2022 - CESOP**

July 2023

Analysis of the ESEB 2022 (Brazilian Electoral Study) database, a post-election survey conducted since 2002. ESEB is part of the Comparative Study of Electoral Systems Project (CSES) at the University of Michigan, with participation from dozens of institutions worldwide.

- **Social Network Analysis - Nova SB**

April de 2023

Analysis and report production on the image of the federal government on social media, with the construction of network graphs in Gephi for mapping connections and interaction dynamics.

- **Territórios em Rede - Aprendiz e Fundação Vale**

October 2022

Development of automation and project management tools, database construction, and production of analyses on school dropout in 16 municipalities across the country.

- **VotoMaps - MAF dataScience**

September 2022

Development of electoral report and online maps for political candidates. (<https://www.votomaps.com/>).

- **School Dropout and Child Labor - Aprendiz**

March 2022

Data collection and analysis on school dropout and child labor in São Paulo during the pandemic.

- **Campaign Consulting - Federal Deputy Candidate**

April 2022

Data analysis to support an electoral campaign for a federal deputy candidate in São Paulo.

- **Police Candidates - University of Bradford**

December 2021

Electoral and territorial analysis of civil police, military police, and security guard candidates in São Paulo State from 2004 to 2020.

- **Qualitative and Quantitative Research - Grupo Mais**

November 2021

Focus group qualitative research and online quantitative research with Banco do Brasil employees to support the Grupo Mais campaign for the PREVI board elections in 2022.

- **Electoral Mapping - State Deputy Candidate**

September 2021

Geographic voting analysis of candidates in São Paulo for the 2018 and 2020 elections.

- **APEOESP Research - Babylon Pesquisa**

August 2021

Telephone survey, data analysis, and programming of an automated dialing Android application.

- **Digital Marketing - Political Party**

August 2021

Development of an algorithm for communication via WhatsApp and email to invite affiliates to a party event.

- **Online Research Database - Private**

August 2021

Analysis and report production on an online research study about individuals' economic behavior for a master's thesis.

- **Belém Elections 2020 - Perspectiva Comunicação**

March 2021

Data collection and electoral analysis in Pará from 2016 to 2020. Geospatial voting analysis of mayoral candidates in Belém in 2020. Examination of electoral poll results in Belém and Santarém in 2020.

- **Electoral Data 2020 - Concordia Public Affairs**

November 2020

Database on the votes of mayors and city councilors in the 2020 elections across the country. Report on the number of elected officials, mayoral reelection rates, gender-based election analysis, and legislative fragmentation.

- **COVID Observatory - Miami University**

Aoril 2020

Data compilation and analysis on state government actions against COVID-19. Development of the COVID Observatory for Latin America.

- **Web Scraping Twitter - POLBRAS/UNICAMP**

September 2019

Database creation on party mentions on Twitter.

- **Market Research - Metalworkers' Union**

August 2019

Telephone survey, data analysis, and programming of an automated dialing application.

- **Slave Labor Database - FGV**

June 2019

Database creation and analysis of slave labor in Brazil.

- **Electoral Mapping - City Council Candidate**

March 2019

Geographic voting analysis for a city council candidate from PT in Campinas in the 2016 elections.

- **Web Scraping FAPESP - ADUNICAMP**

September 2018

Algorithm development for web scraping to build a database of FAPESP grantees. Data analysis and report production.
